We define *public scholarship* as "diverse modes of creating and circulating knowledge for and with communities" (Center for Community and Civic Engagement, 2018) by integrating research, teaching, and service with community engagement for the public interest (Yapa, 2006). Public scholarship also "does not assume that useful knowledge simply flows outward from the university… it recognizes that new knowledge is created in its application in the field and therefore benefits the teaching and research mission of the university" (Yappa, 2006, p. 73). In other words, public scholarship is characterized by providing scientific-evidence based information to the public (e.g., science communication and outreach), as well as gaining new insights from these dissemination efforts (e.g., applied evaluation and feedback).
